## Hallmark Hotel Stourport Manor Choose Recotherm over Heatstar to upgrade their swimming pool ventilation system.

The Hallmark Hotel Stourport Manor have a spa leisure complex that was served by an old Heatstar air conditioning unit, which after years of service was no longer working correctly and was costing a lot of money to keep operational. This affected the hotels ability to provide an optimal environment for guests in the leisure complex and from the maintenance engineers point of view was becoming increasingly difficult to maintain.

### ASSESSING THE PROBLEM:

The increasing fallibility of the old Heatstar air conditioning unit meant that conditions in the pool hall had deteriorated over a period of time resulting in condensation on the windows and low temperatures in the pool hall. This was causing both customer enjoyment and the structure of the building to deteriorate. Alane Broom the maintenance engineer felt that rather than to continue to spend money on the old unit the decision should be taken to get it replaced.

### EVALUATION:

A number of companies were approached and Recotherm's offer was chosen as being the best in terms of cost and technicality. The hotel liked the fact that Recotherm are swimming pool specialists who make one of the best units on the market and were also able to supply the unit in flat packed form, meaning that the old unit could be removed and a new unit installed without disturbing the structure of the building. Bringing the facility back on line quickly.

### SOLUTION:

Recotherm supplied a model Aeris D which has been specifically designed as a replacement unit for both the Calorex Delta and Heatstar Phoenix units. Using this unit meant that the ductwork cost could be kept to a minimum. It was supplied flatpack as an aid to installation.

### BENEFITS:

- A better environment in the pool hall.
- State of the art controls including a touch screen display with temperature graphs, meaning greater control of temperature and humidity.
- E spec fans with seamless control mean quieter operation.
- Lower running cost

Alane Broom, Maintenance Engineer, commented: "We are very happy with the installation and would definitely recommend Recotherm to anyone else looking to replace their ventilation unit. The unit works great and we haven't had a bean of condensation on any of the windows since it was installed."

### Martin Killen of Recotherm commented:

"We are set up to provide solutions to these situations where old units are end of life and the customer needs a more reliable, cost effective solution with minimal disturbance in the transition. This was a relatively easy installation for us and one we completed in 7 days.

Our after sales service plan means that engineers like Alane can rely on this unit for years to come and dedicate their energies to more pressing matters."
