INNOVATIVE POOL VENTILATION TECHNOLOGY FROM

Recotherm

01527 894533 www.recotherm.co.uk

Recotherm's knowledge of Trend keeps them ahead of the competition.

From their very first units Recotherm rejected the use of cheaper on-off heating valves and light/high usage modes like some units on the market. They wanted their units to operate seamlessly as the load varies, to enable them to always work at the optimal efficiency, not jump between light and high usage modes. This capability was felt to be vital if users were to benefit from the energy saving potential of fresh air ventilation.

This is a distinct point of difference between Recotherm

and many other products on the market, which are built to a price and compromise control capability, which limits running cost savings when installed. This often results in initial cost savings on purchase price being more than outweighed by extra running costs in the lifetime of the unit.

40% saving on running cost

Typical refrigerant dehumidifier system costs 65p per 14 Kg of moisture removed

Recotherm system costs 42p per 14 Kg of moisture removed

Recotherm chose Trend controls and have been a Trend original equipment manufacturer (OEM) since 1988. This means Recotherm can buy the equipment at preferential prices and all Recotherm engineers are fully trained on Trend software control strategies, which are then coded in house into Recotherm's software.

The advantage of this to the customer is that any special requirements can easily be accommodated and problems can be quickly resolved because Recotherm unlike other manufacturers do not need to refer back to a third party supplier.

In today's high-tech world people also expect to be able to control everything from their mobile phone and because Recotherm use the trend IQ 4 controller they are able to offer this function if required. It also has the ability to talk to the latest home automation systems via a SIP module or bacnet.
