## Cutting edge fresh air, with spa fragrance a UK first for prestigious London apartments

190 The Strand is a highly prestigious development, offering bespoke apartments located close to some of the most iconic parts of London, where a two bedroom apartment starts at £9,000,000.

This development benefits from a pool hall that features a mosaic tiled 125m<sup>3</sup> pool and a 30m<sup>3</sup> vitality pool with state of the art water and air jets. Berkley Homes engaged Aqua Platinum of Fareham to build this leisure centre to ensure it was a facility fitting for this property.

Recotherm were appointed by Aqua Platinum to manufacture a 'controlled fresh air unit' to control the pool hall atmosphere. Aqua Platinum chose to use a Recotherm unit because of its superior build quality and reputation for long life, it also offered some advanced features not available elsewhere.

The unit supplies 1.5 m<sup>3</sup>/s into the pool hall managed by a highly sophisticated climate control strategy, using Recotherms own software, operating by the latest building energy management system.

Further to the already impressive standard build quality items was Recotherms

*alpine air, apple fresh, bergamot,  
citrus, cherry blossom, cinnamon,  
flower fields, fresh crisp linen,  
guava cucumber,  
jasmine, lavender,  
lemongrass, mint,  
ocean breeze, orchid,  
peppermint, rainforest,  
redwood, rose, sea scent, springtime,  
summer bliss, twinkle star, vanilla.*

Recotherm  
*Scent*  
solution

'Scent solution' which was recently launched, this installation is a first for the UK market.

'Scent solution' is an integrated system that disperses a wide range of selected aromas such as alpine air, apple fresh, bergamot, citrus, cherry blossom, cinnamon, jasmine, lavender, fresh flowers, mint, lemongrass, ocean breeze, orchid, rose, sea scent, vanilla to name but a few. It can be sited within the main plant or externally to provide fragrances that make the pool hall experience more like an expensive spa.

It is a bespoke system of pump, diffuser and control technologies that diffuses aromas. This involves 'Cold Air Diffusion'. which in simple terms, pressurises liquid aromatic oil and releases it as a gas, through the diffuser. This is a highly controlled process releasing droplets of 3 Microns or smaller, droplets that are larger, are recycled. This means that diffused droplets are very small in size (3/5th size of small dust particles) and so they do not condense – which could damage walls – and users cannot feel them when they breathe it in, thus making the space feel that it has a natural scent.

The diffuser can be set up to operate continually or for just a few hours a day by utilising the built in scent time clock and the intensity of the fragrance can be adjusted by using the 'scent intensity' control.

Berkley Homes and Aqua Platinum are very happy with the unit and particularly impressed with the fragrance which in this case was lemon grass.
